Welcome

What this workshop provides:

• Policy Review
• Safety Enhancements
• It is NOT a replacement for TCT

• DO NOT ALTER this presentation
  – But you can add local information to the end
Ground Rules

• This Workshop should be Interactive, NOT all lecture
  – Ask Questions
  – Answer questions
  – Share experiences (keep between the buoys)
  – Share Insights

Participate  Participate  Participate
Risk Management (RM)

- Coast Guard (including Auxiliary) operations are inherently complex, dynamic, potentially dangerous, and, by nature, involve the acceptance of some level of risk.

- Risk **MUST** be continuously evaluated throughout every mission not just at the initial briefing.

- Mission plans and risk profile should be reported to OIA.
Risk must always be evaluated against the mission objectives. No Mission is so important that it supersedes any risk associated with accomplishing the mission.

Do not hesitate to cancel the mission or adjust mission objectives if the risk level grows to high. This (Risk assessment) is your responsibility to the mission just as much as accomplishing the mission itself.

Note to Instructor. On the “Marijuana is not legal for use under federal law” bullet there will be NO additional discussion or clarification
Risk Management

Risk Management is more than filling out a form or a process.

It is a mindset and awareness of risk and reward that can be used not only in your Auxiliary life but in everything that we do in our personal lives.

It is a Safety Culture!
Risk Management is an ongoing, dynamic process. All members have responsibility to look out for one another and constantly evaluate risk vs benefit in all operations.
Risk Management As A Way Of Life

• We Take Steps To Mitigate The Risks
  – Ask for Help
  – Modify Our Plans
  – Reassess continuously
    • Change Our Start Time
    • Change Our Route
    • Change Our Crew
  – Check Our Equipment (be proficient, not just aware)

You can never eliminate all risk, but you can always take steps to reduce risk.
Major Changes to RM

The Risk Management Instruction (COMDTINST 3500.3A)

- Updates the RM process from 7 steps to the new 5 step process
- Reintroduces the PEACE and STAAR models
- Introduces the Risk Assessment Matrix (RAM)
- Requires the use of GAR 2.0
No more numbers.
STAAR Model

- **S**pread out – Disperse the risk by increasing time between events or using additional assets
- **T**ransfer – If possible, locate a better suited asset to conduct the mission
- **A**void – Wait for risk to subside (daylight?)
- **A**ccept – Benefit should outweigh Risk
- **R**educe – Use PPE, additional training or rest, stress reduction
The Coast Guard has three main versions of the Risk Assessment (GAR) form; Aviation, Ashore, and Afloat. The “Afloat” version is for large cutters, the “Ashore” version is for shore based units including small boats. Our surface crews can use either the afloat or ashore versions (the wording is the same).
What You Need to Do in Surface Operations

- Complete the online “Introduction to Risk Management” training course 100202 (one time)
- Attend “Annual Risk Management TCT Refresher”
  - The training shall be delivered by certified facilitators
  - New qualifications for Auxiliary TCT facilitator qualifications provided on BSX Policy Letter 19-03 (03 July 2019)
  - Auxiliary facilitators (TCTAUX) should make annual TCT Refreshers more available

An Auxiliarist must be approved through the Auxiliary chain of leadership. The DIRAUX is the sole authority for certification of Auxiliary TCT Facilitators. Nominees will be selected based on proven performance, the ability to facilitate group discussions/foster open communications, and excellent grooming/uniform standards.

Nominees must also meet the following training requirements:
(1) Complete the Introduction to Risk Management course (100202)
(2) Complete the TCT Refresher as a student
(3) Certify as an Instructor (IT)
(4) Possess at least 3 years of relevant Auxiliary and/or professional experience.

Examples of relevant experience are: Surface Operations, Aviation, and Marine Safety qualifications, licensed mariners, professional experience in emergency services, safety/risk management, professional education, or military service. Forward any questions regarding relevant experience to the DIRAUX for consideration.
Remind everyone that anyone on the crew (or passengers) can cancel the mission at any time if they determine the risk outweighs the gain. It is not a group decision/majority rules situation. Everyone on board must continually assess their own physical condition as well and that of their fellow crew members.

Mission Risk

• Everyone on board should evaluate the risks
  – Do we have the right facility for the mission?
  – Is the weather within safety limits now and expected throughout the mission?
  – Do we have the correct mix of crew/experience for the mission?
  – Do we clearly understand our tasking?
  – Am I ready/capable for this mission?
  – Is the rest of the crew ready and capable for the mission?
Everyone on the mission should go through this I’m Safe list and answer these questions honestly.
Consider every mission a training mission and learn from it. The 12 hour club is when a member only does the minimum required hours. This will not make for a proficient member of the crew. Instructors are to STRONGLY encourage “Proficiency”
Mishap Reporting

ALL mishaps must be reported to the Order Issuing Authority (OIA) immediately!

- A Coast Guard mishap is defined as any unplanned, unexpected or undesirable event that causes injury, occupational illness, death, material loss or damage.
- Additionally the Auxiliary requires any incident which causes a disruption or alteration of the mission reported.

- This allows the mishap to become an education opportunity to be shared across the entire organization.

Per COMDTINST_M5100.47.pdf - a Mishap is “An unplanned, unexpected, or undesirable event or series of events resulting in death, injury, occupational illness, or damage to or loss of materiel. “

Need to define MISHAP. Anything causing an unplanned stop besides a comfort stop is potentially reportable. Certainly any mechanical or maintenance issue, but people should use common sense in what they report. Anything that you expect to be reimbursed for should definitely be reported. That being said, it is better to over report than under report. Nobody will be criticized for reporting too much. When in doubt report it.

Operations Policy Manual requires those with firsthand
knowledge of a mishap to report it. Let’s talk about that.

If you are confident that the principle parties are reporting to the organization, redundant reporting is not needed unless requested.

Why are they requesting that all mishaps; with or without injuries and even if there is no damage be reported?

Whenever a mishap occurs, even with no real damage or injury, is reported this information can be used to aid other members of potential risks and how this risk can be avoided.

This information you provided can be used as a learning or teaching event that can help all of us to become safer.
Mishap Reporting

- Mishap report does not equal punishment
  - However this does not apply for reckless or foolhardy actions
  - Incidents occur
  - Not reporting a mishap MAY lead to punitive action

- All Districts must report summaries (no names) of damage & injury type mishaps to:

  Roy Savoca, DIR-Rd  email: roy@savoca.us

2020 Surface Operations Workshop  Response Directorate
Coxswain Responsibilities Review

- Obtain orders from OIA
- Ensure currency:
  - Of Facility Inspection
  - Of Crew certifications
- Responsible for ENTIRE crew
  - From pre-mission brief to debrief
  - Ensuring each member knows their role AND is capable of filling that role
Crew fatigue is critical to the GAR score and cause to shorten or cancel the patrol entirely. The Coxswain should always endeavor to stay at or near the helm in order to be alert and in good position to respond to issues unless relieved by a competent crew member. Common sense applies when it is advisable for the Coxswain to change his/her position (e.g. head calls).

Maintaining a proper lookout is not only required for safe operations it is the law per the Navigation Rules. Do not just ASSUME everyone will pay attention and lookout for dangers.

**Coxswain Responsibilities**

- Designate primary lookout(s)
- Exercise DIRECT supervision when facility is being operated by crewmember
- Ensure that helmsman NOT leave the helm station
- Ensure kill switches are used (when applicable)
Coxswain Responsibilities

- Ensure all crew members are capable of performing the mission
- Ensure crew follows fatigue standards in Aux Ops Policy Manual
- Ensure all crew are equipped with required PPE and are proficient in its use
- Ensure PPE maintained in accordance with Maintenance Procedure Cards
It’s important to note that in the operations policy manual we already have statements saying it is EVERY crew person’s responsibility to evaluate their own physical condition. Additionally the Coxswain is responsibility evaluate the condition of the crew before (and During) the start of the mission.
It goes on to state EVERY crew member should be aware of the condition of fellow crew members

In reality isn’t this a tenet of our TCT program

We need to do everything we can ensure this happens
Capable of performing the mission includes physical capabilities including vision and hearing acuity. Make the point that we are all to watch out for one another! The key is he crew, not the mission.
ORM is all about a continuous review of changing conditions that may influence the “Risk” of a mission.

**Crew Responsibilities Review**

**Safety is paramount**

- If you see something, say something
- Use your Risk Management Tools
- Remember ORM (Operational Risk Management)
- Ensure you are well rested prior to getting underway
If a facility is manned by a Coxswain and one crew, the facility must come to a full stop before the use of a cell phone or mobile device.

Important - cell phones can never be used by the person at the helm even if at dead stop because they need to be able to immediately react. The Cox’n can never use a device while the vessel is moving as they need to maintain full situational awareness.
NAVRULES require all vessels to maintain a listening watch on VHF 16 whenever they are not using (meaning “transmitting”) the radio. We recommend all facilities have two installed VHF radios with one kept on VHF 16 at all times and the other used for operational control. If you only have one then use Dual-Watch or scan when not actively talking on it.
Important Reminders

Radio Communications

- In all radio communications, we are to act as professionals
- At no time shall we make reference to ethnicity, race, gender, sexual orientation or religious affiliations in radio transmissions
- This is a zero tolerance policy and must be strictly adhered to

Note: physical descriptions (race, gender, etc.) ARE acceptable in transmitting if you are working a SAR case and that information is pertinent to prosecuting the case and finding or assisting the boater.
You may tow if the vessel is in peril, or there are medical concerns.

You may not tow if a private salvor or towing company has been notified and is available in a reasonable timeframe in this case stand by until the salvor arrives. “reasonable” time has not been clearly defined so check with your OIA. Anything less than an hour would be considered “reasonable”.

It must need assistance AND not have already contacted CG or a private tow service. You should not try to pick up the tow to “save them money” and take away business from a commercial tower.

You may pick up the tow to pull them to a safer location while they await the towing service.

You notify your Operational Commander of your intent to tow. If they need you on a higher priority task they will tell you that (see notes on next slide)

You do not need to ASK permission to tow.
If the boater called for help you may also pickup a tow in some instances if a commercial tower is not available in a “Reasonable” amount of time.

From the CG Addendum 4.1.6.3.f

When specific alternate assistance is not requested or available, mariners will be informed that a broadcast can be made to determine if someone in the area can come to their assistance.

Coast Guard resources or Auxiliary vessels may also be directed to respond if no alternate responder can do so within a reasonable period of elapsed time. Factors governing the elapse of a reasonable period of time for assistance to arrive on scene are discussed below, but such a period should not normally exceed one hour from first awareness of the case.
Assistance to Auxiliary Facilities

- Coast Guard resources or Auxiliary facilities may be used to help Auxiliary facilities in need of assistance at any time.

- An Auxiliary Facility is defined as an Operational Facility having a current accepted offer of use whether under orders or not.

- It is NOT just any boat owned by an Auxiliary member.
Please emphasize that safety is the top priority, and if the environment or other factors increase the risk...the GAR must be reviewed to determine what should be done to reduce the risk to an appropriate level. This includes aborting the mission if necessary.

*** All on board must be trained, equipped, and certified to handle Hazmat situations before you respond to this type of incident.
Provide SAR Response

- Do only what you & your facility/crew are capable of.
- **Safety of your Crew Always Comes First**

- Operate at safe speed for the sea conditions and local environment

- Observe all NO WAKE zones – set the example for all other boaters
AOM Reminders

- Patrol orders are good for a 24 hour period from the first itinerary entry
- Request multiple orders for multiple days – do not combine
- Time in the itinerary must be consecutive with no gaps. One category ends at 1200, the next begins at 1200, **Not** 1201 or later
Discuss the dangers of “crew fatigue”.

AOM Reminders (Con’t)

- Mission Code 01D – Operational Standby, used for time when you are not underway but available such as:
  - Prior to getting underway, crew prepping for mission
  - When moored for meals, breaks, logistics stops
  - Debriefing and cleaning up after a mission

- Important since hours accumulated in 01D are included in calculating “crew fatigue parameters”
AOM Reminders (Con’t)

- Training missions (22A) do **not** require a QE to be on-board
- If on a QE check ride, use 22A and list the QE as required by your district and note in comments box the QE’s name and actual time doing QE activity
- If a mid-patrol crew change, list all crew members and note times for each in the comments box. The coxswain and/or facility cannot be changed
- The IS officer will adjust the entries in AUXDATA
AOM Reminders (Cont'd)

- Mission code 23A – SAR Standby
  - Use only when specifically assigned by OIA to assume dedicated SAR standby or actual SAR mission
  - Qualified crew must be in immediate vicinity of facility and in prescribed uniform.
  - Examples: prolonged searches where Active Duty (AD) crews may exceed fatigue standards, AD assets not available, busy/holiday weekends
AOM Reminders (Con’t)

• When requesting orders, always check the last Facility Inspection Date
  • If the patrol date will be 1 year + 45 days from the last inspection, a new offer for use must be submitted before the patrol. AOM will not allow order completion with an out of date inspection
  • If the date you try to complete orders is over 1 year + 45 days from the last inspection, AOM will not allow completion of the orders, even if the patrol date was within the 1 year + 45 days
AOM Reminders (Con’t)

• Meals are not automatically checked off - must be selected manually for each member
  • Select only the meals that were actually consumed during the underway portion of the patrol, not before and after
  • FINCEN does not pay for water, soda, snacks, etc.
  • If you receive fuel or meals at no cost from the Coast Guard, check “Government Provided” box
AOM Reminders (Con’t)

• Do not claim engine oil; it is included in your SAMA payment
  • Fuel additives are 2-cycle oil, ethanol mitigation, injection cleaner, stabilizers, octane enhancer, etc.
  • Include receipts as required. CG policy is $75; Districts may require receipts at a lower amount to include any and all claimed expenses
  • Per the Operations Policy Manual, patrol orders must be submitted within 30 days after completion of the patrol
**Subsistence Payment Reminders**

- Subsistence (meal) payments go to the Owner or Operator as selected on the order request
  - The member receiving the subsistence payment is obligated to either
    - Turn the payment over to each crew member or
    - Provide a meal(s) to each crew member commensurate with at least the subsistence amount paid
- Subsistence payments are not to be kept by the owner or operator or put in a boat maintenance fund. This is what SAMA is for
New AUXDATA / AOM System

- The functions of AOM will be incorporated into the new AUXDATA system
- There will no longer be two separate systems
- Patrol orders will be managed in the new AUXDATA system when it comes on line.
Additional Reminders

• Any other special requirements from your local DIRAUX?

• How about your OIA?
The Auxiliary and the Sea Scouts identified significantly beneficial prospects of enhancing their partnership including improved Sea Scout training opportunities, enriched Coast Guard and Auxiliary recruiting, and better overall promotion of recreational boating safety among our Nation’s boating public.

There are specific requirements when working with Sea Scouts that need to be followed,

- Consent Forms
- Required training specified training as defined in the SOP
- Limitations in participation in SAR activities
- Qualifications open to sea scouts

Refer to the SOP published 1 November 2019 for requirements and details.
Bravo Zulu!

Great Job!

Thank you for your participation in the 2020 Surface Operations Workshop.

Please share your thoughts and feedback about this workshop with us.
